LG-326 Rubber Overmold

AR16 M/16

Until recently, Lasergrips were only available for pistols. The need for close-quarters and urban tactical situations led us to create two different models of Lasergrips for long guns: the integrated, carry handle-mounted LG-525 and the foregrip-mounted VF-302.

LG-525
Rubber Overmold,
Front Activation

The LG-525 is an integrated laser system for AR-15/M-16 rifles with A1 or A2 uppers. (Will not fit A3 models with removable carry handles.) This system replaces the factory pistol grip with a rubber-overmolded Lasergrip that houses the front activation switch, battery and master ON/OFF switch.

VF-302M - A.R.M.S. Mount

VF-302M uses a military-style A.R.M.S. mount for quick release and security.

VF-302

The VF-302 is a laser-equipped vertical foregrip that can be mounted to a picatinny (1913) rail. It uses the proven LG-302 Beretta 92 Lasergrips, mounted to a skeletonized billet aluminum grip.

VF-302 - Thumbscrew Mount

LASER SIGHTS

Installation Takes 5 Minutes.

If you can field-strip your gun, you can install your LaserMax sight no gunsmithing required!
Almost instantly you'll have a laser-sighted weapon which can be used outdoors from dusk till dawn or indoors round-the-clock.
Fits all standard holsters

The Only NATO Approved Laser Sight for Handguns.

Law enforcement departments and military organizations around the world including the North Atlantic Treaty Organization (NATO), specify LaserMax for their personnel.

Highly Visible, Highly Intimidating.

Once you place that intimidating red dot, pulling the trigger may never even be necessary.
If you must fire, the LaserMax does, improves aiming speed and increases accuracy, especially in high-stress situations.

Lasermax for Shotguns

LMS-1202

For: Benelli M10 14, Remington 870, Remington 1100, Remington 1187 12-gauge shotguns with 18" or longer barrels & 2 or more-round extension tubes.

Wavelength: 635nm (red-orange)
Power Output: 5mW (brightest available - blinks for highest visibility)
Solid State LED Light 60 lumen
Laser axis within 1 inch of bore
Laser Operating Temperature: 10°-120° F
Battery Model: CR 123 lithium batteries x2 - Standard Tactical light batteries
Accuracy (20 Yards): User Adjustable
Warranty 3 years (excludes batteries)
Size: 4.38"L x 2.79"W x 2.02"H
Spot size: at 7 yds 5/16", spot size at 25 yds 3/4".
Weight: 13.4 oz. with batteries

Press in on the red activation switch to turn on. Press again to turn off.
Optional remote activation switch also available for momentary on/off.

Lasermax for Pistols

Whether you are a Law Enforcement professional or a civilian protecting your home and family, equipping your firearm with a laser sighting device can provide you the extra confidence and technical advantage to succeed.

Easy Activation

To activate the laser, simply push IN on the switch pin, which is located inside the takedown lever. Pushing in from either side will turn the laser on; the middle position is off.
